## Old Infrastructure High Total Cost of Ownership

Front-end and back-end services on legacy infrastructure:

- 3 different database platforms (Complexity)
- High development costs
- High integration costs
- High maintenance costs

Search engine based on ORACLE

- High maintenance costs
- Speed limitations
- Scalability issues

Clusterpoint - Introducing instantly scalable database as a service

# Introducing Clusterpoint platform

## Improving site Search functionality in 2008

### New Infrastructure:

- Front-end database and search engine on Clusterpoint;
- Back-office CMS on PostgreSQL
- Hardware rented from another cloud vendor

### **Benefits:**

- Search became 100 times FASTER
- NEW search features introduced
- System maintenance costs REDUCED by 50 %

Clusterpoint - Introducing instantly scalable database as a service

# Software management in Cloud

### 3 different parties managing diffrent parts of infrastructure

Cloud hardware infrastructure managed by cloud vendor;

Software managed by two other service providers.

#### **Problems:**

- Complex system management - too many parties involved;

- Scalability issues with provisioned hardware;
- Stability issues;
- High maintenance costs.

Clusterpoint - Introducing instantly scalable database as a service

## Moving to Clusterpoint Cloud Moving web infrastructure to Cloud in 2014

#### New infrastructure:

- Software and Hardware in Clusterpoint Cloud;
- Front-end DB and search engine on Clusterpoint;
- Back-office CMS engine still in PostgreSQL.

#### **Benefits for moving to Clusterpoint Cloud:**

- System stability and seamless upgrades;
- Single point of contact better service;
- Systems' response time decreased 4 times;
- 40% cost saving maintenance and services.

Clusterpoint — Introducing instantly scalable database as a service

# Looking forward

### All web infrastructure in Clusterpoint Cloud

By the end of 2015 all the web infrastructure should be running on Clusterpoint for all Latvijas Talrunis portals:

### **Benefits:**

- Unlimited scalability (no hassle with peak hours);
- Simple infrastructure management;
- Flexible data management;
- Cost savings with Clusterpoint pay per use model;
- NoSQL software speed benefits

Clusterpoint — Introducing instantly scalable database as a service

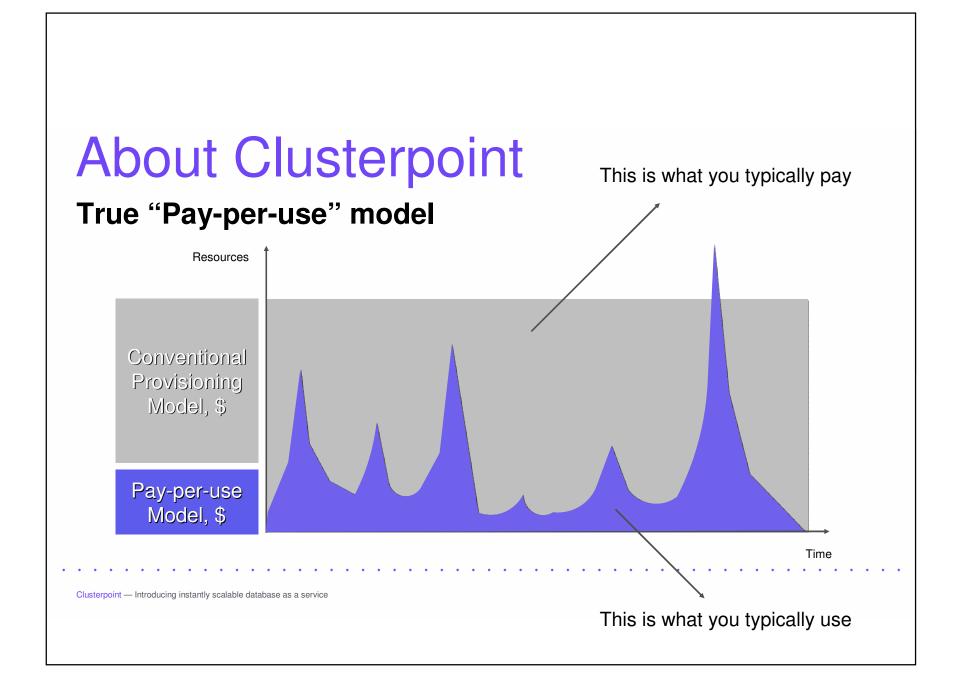

# Case summary

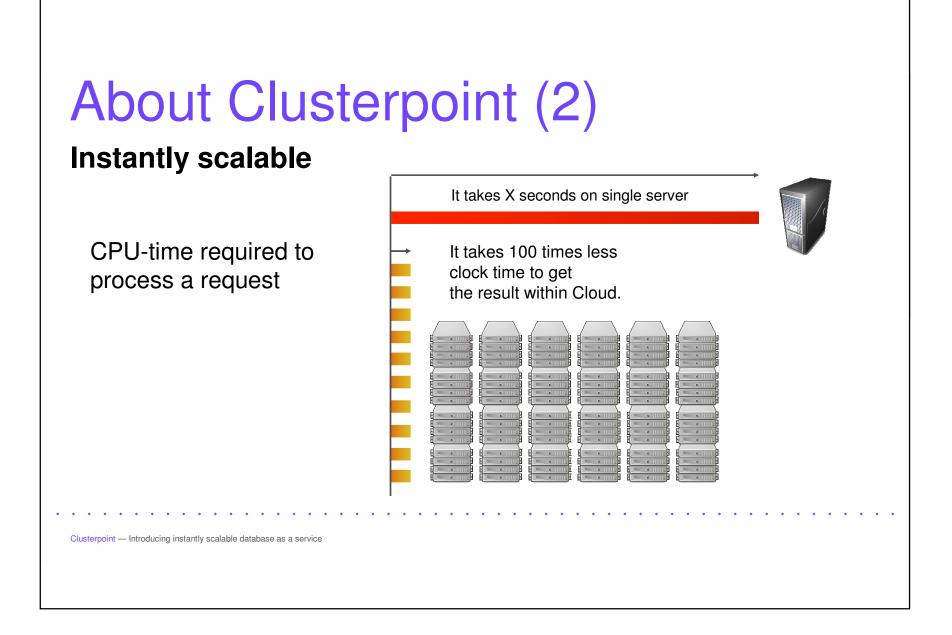

## **Benefits of moving to Clusterpoint Cloud**

By moving from old and expensive legacy systems to Clusterpoint Cloud, there were following benefits:

- Customer satisfaction increase due to:
- Systems ability to scale instantly according to web traffic needs;
- Improved system response time;
- Improved data relevance in Business listings, Search and Maps functionality;
- Significantly (~ 70%) reduced system's TCO due to:
- reduced system maintenance costs (single platform benefits).
- Reduced future development costs (no integration costs)
- Infrastructure Pay per use model no overpaid resources

Clusterpoint — Introducing instantly scalable database as a service

• Thank you!
